

## Why Arkansas Needs a National Clean Water Trust Fund

The United States's wastewater infrastructure, aging and increasingly unable to handle the pressures of modern society, is in serious danger. When pipes break and sewers overflow, communities, the environment, and our economy all suffer.

Recognizing that states across the country were faced with clean water spending requirements well beyond their ability to support, the federal government created the Clean Water State Revolving Fund. The fund, established in the late 1980s, provides states with federal grant money that they then use to make low-interest loans to communities for clean water projects.

Unfortunately, funding for the program has atrophied since it became fully operational in 1991. Since that year, funding has been cut by half (nearly two-thirds when adjusted for inflation), leaving states scrambling to deal with growing backlogs of maintenance and improvement projects. Broken pipes and sewer overflows spill more than one trillion gallons of untreated sewage every year and contaminate our beaches, waterways, and estuaries.

Given the fickle year-to-year funding of the SRF and the urgency of our clean water troubles, we need a new solution. A federal clean water trust fund would provide a steady, reliable, and equitable source of funding for needed projects across the country. By sidestepping the contentious appropriations process, a trust fund would safeguard our clean water infrastructure, our environment, and our economy.

**Funding Gap:** Arkansas lists \$91 million in needed wastewater infrastructure projects on its most recent Intended Use Plan, 1/13th of which would be funded by the federal government's 2007 allotment of \$7 million.

Federal contributions to the state's clean water funding efforts have decreased by 48.1 percent since the Clean Water SRF was fully implemented in fiscal 1991 and 66 percent when adjusted for inflation.

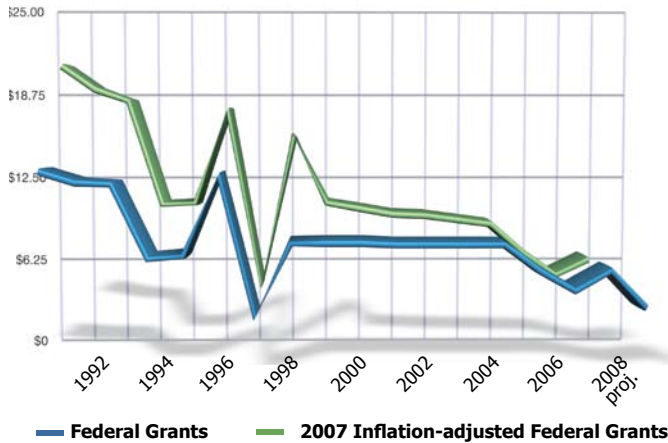

**Water Quality:** According to a 2000 EPA assessment, 14 percent of Arkansas' river miles and 5 percent of its lakes suffer from impaired water quality.

**Job Creation:** One billion dollars in federal infrastructure investment leads to approximately 47,500 new jobs. Addressing Arkansas's currently listed wastewater infrastructure needs would spur more than 4,320 employment opportunities.
